

SUPPORT MESSAGE BY

Ir. Dr. MEGAT ZUHAIRY BIN MEGAT TAJUDDIN
CHIEF EXECUTIVE OFFICER OF NATIONAL CYBER SECURITY
AGENCY (NACSA), MALAYSIA

Cyber security today stands at the forefront of national security, economic continuity and public trust in the digital age. As Malaysia continues to accelerate the adoption of advanced digital technologies across government services, defence ecosystems, energy, financial systems, and including national critical information infrastructure (NCII) sectors, cyber resilience has become a national priority that requires sustained vigilance, strong coordination and collective responsibility.

This commitment is reflected through the Malaysia Cyber Security Strategy (MCSS) 2025-2030, which outlines the nation's strategic direction towards achieving sovereign cyber security resilience and nurturing an adaptive digital society. Guided by a whole-of-society approach, the Strategy emphasises that cyber security is a shared responsibility that extends beyond government institutions to businesses, industry players, academia, civil society and the public. In an increasingly interconnected digital environment, strengthening cyber safety and resilience requires the active participation and commitment of all stakeholders.

The National Cyber Security Agency (NACSA) serves as the national lead agency for cyber security, mandated to strengthen Malaysia's resilience against cyber security threats through the coordination and consolidation of national cyber security expertise and resources. In this regard, NACSA is committed to advancing the national cyber security agenda through the development and implementation of effective policies, legal and regulatory frameworks, and strategies; protection of NCII, mitigation of cyber security threats and cybercrimes, strengthening cyber security awareness, as well as fostering strategic regional and international collaborations.

Against this backdrop, CyberDSA 2026 is a timely and relevant platform that reflects the increasing importance of cyber security within the broader defence and national security landscape.

For NACSA, platforms such as CyberDSA are instrumental in strengthening strategic coordination and fostering trusted partnerships with industry players and international stakeholders, advancing practical capabilities to enhance Malaysia's cyber resilience, and facilitating critical discourse on governance, talent development and operational resilience; areas that are integral to Malaysia's national cyber security priorities and long-term cyber security aspirations.

I would like to extend my appreciation to the organisers for their efforts in advancing this initiative and wish CyberDSA 2026 every success in strengthening cyber security cooperation and resilience for Malaysia and the wider region.

Thank you.
